PREFACE.

The large additions which, within the last ten years, have been made to the Society's Library, and the very incorrect and defective state of the existing Catalogue, induced the Council, early in 1854, to order a new one to be made, which should not only comprise all the titles scattered through several printed and written Supplements, but, as far as possible, be free from the numerous errors which had accumulated in the edition of 1844, in consequence of that volume having been compiled by amalgamating former editions, the defects of which it had retained and multiplied.

To avoid the last-named source of error, Mr. Wheatley, now the Sub-Librarian of the Society, to whom the preparation of the Catalogue was entrusted, received instructions wholly to disregard the existing Catalogue, and to construct the new one directly from the books themselves. For this purpose, every volume was taken down by him, and carefully examined, and towards the close of the year the manuscript list was completed.

It then became a subject for consideration whether a fairly-written copy of the Catalogue should be made, and kept in the meeting-room, or whether it should be printed, and so distributed among the Fellows. Careful calculations which were made showed the inconvenient number of unwieldy volumes to which a fairly-written copy must extend; and

when the peculiar character of the Library was considered—that of circulating among a large number of persons—it appeared to the Council that they would best consult the convenience of the Fellows by enabling each one to possess a copy for his own reference. The printing of the Catalogue was therefore determined on; and a few explanatory remarks upon the principles of its composition may, perhaps, prove useful to those who consult it.

It consists of two parts,—the one containing an alphabetical arrangement of works, according to their authors' names; the other comprising Transactions, Journals, Reports, and similar periodical publications. The object of making this twofold division of the Catalogue was to give a fixed and recognised position to this latter class of publications, so difficult of classification under any one general head in an alphabetical arrangement.

The name of each author is printed in Roman capitals; and his works are placed in the chronological order of their publication, with these two exceptions;—that any collected edition of his works stands first, before the list of the original editions in their separate form;—and all successive editions of a single work, and publications supplementary to, or otherwise connected with it, take precedence of the work next in order of date.

To every collected edition of an author's works, consisting of more than one volume, a short abstract of the contents of each volume is appended. This plan is obviously of great convenience in a lending library.

Whenever a paper, originally published in a Journal, or in the Transactions of a Society, has been separately reprinted, such a reprint has been regarded as an independent work, and catalogued accordingly. Papers of this kind are as truly the works of their respective authors as more formal publications; and they are fre-

quently found quoted by writers who have never seen the Journals or Transactions in which the papers originally appeared.

With regard to christian names, the infinite varieties in title-pages rendered the adoption of any one general rule impossible. To have given such names in full would, in many foreign and old Latin works, have caused the first line of an article to consist wholly of christian names. It has been thought sufficient for the identification of authors, to give the first of these names in full, and to designate the others by their initials.

In cases where an author's name has been omitted from a title-page, or partially concealed under initials, but where conclusive evidence of authorship could be obtained from the work itself, or from other sources, the name has been printed in full, but enclosed between brackets, [ ].

In the difficult task of abbreviating title-pages, it has been made a rule to adhere as strictly as possible to their exact words, and, whenever it was necessary to add words not there found, they have been enclosed in brackets, as interpolations.

Words not existing on a title-page, but added for the purpose of distinguishing an author from another of the same name, or for his more precise identification, are printed in italics.

Letters indicating honorary titles, such as M.D., F.R.S., &c., have generally been omitted, on the ground that it was impossible to distribute them with strict fidelity among works published in so many different languages, and at such various periods. The use of these letters would not have ensured the identification of doubtful authors; for, in several cases, where two authors of the same name were met with, they were found to have similar honorary titles. In the few instances where these titles could aid identification, they have been inserted.

Great pains have been bestowed on the correct insertion of foreign latinized names, the derivation of which from the place of an author's birth is a frequent source of error in catalogues. Cross-references have been liberally used to avoid mistakes of this kind.

In old works, where a variety in the spelling of an author's name frequently exists among different editions, the best known orthography has been adopted, with cross-references from the other forms.

Among the contrivances for saving space may be mentioned the adoption of a single dash, ———, of uniform length, at the head of an article, to signify the repetition of both the christian and surname of the preceding author; a second dash, ——— ———, implying that not only the preceding author's name is to be understood, but his work also, to which work the words immediately following the two dashes refer.

Cross-references have been employed with a liberality which, at first sight, may appear excessive; but those who are in the habit of consulting catalogues will fully appreciate the value of such guides. The frequent repetition of the words "see" or "vide" has been avoided by invariably printing in italics the word under which the cross reference is to be sought.

It would have been strictly correct to have excluded from an alphabetical list of authors' names all anonymous publications; but as utility—not bibliographical nicety—has been kept in view throughout the Catalogue, it has been thought advisable to bring these publications into alphabetical order, by selecting as a heading the chief word of the title; distinguishing it, at the same time, from a proper name, by adopting small type instead of capitals.

Sometimes it has been found necessary to invent a word, descriptive of the subject of an anonymous work, as a heading to the title. Such a word is always printed in italics, and uniformly in English, to avoid

scattering anonymous works throughout the Catalogue under different synonyms.

With the object of saving space, and preventing the frequent repetition of such words as—"Dissertatio Inauguralis—Thesis Academica—Disputatio Academica—Thèse pour le Doctorat en Médecine," &c.—all works of this kind are marked by an asterisk (*) prefixed. The adoption of this sign, while it renders a mass of Theses available for reference, prevents their becoming a source of repeated disappointment to readers in search of works of a more substantial and valuable character.

In the following pages no notice has been taken of the numerous duplicates with which the Library abounds; but their number is ascertained by the shelf-marks prefixed to the entries in the large library copy of the Catalogue.

The TRANSACTIONS of Societies, JOURNALS, and REPORTS, have been separately placed at the end of the General Catalogue, the two former classes of publications being first grouped according to their countries and languages, and then arranged alphabetically. Cross-references from the names of editors of Journals and compilers of Reports have been made throughout the General Catalogue; and in those instances where a Journal is most familiarly known by the name of its editor, the cross-reference has been repeated in the alphabetical list of Journals. The REPORTS have been classed according to their subjects, which are also placed in alphabetical order.
